

An agent generated this page on demand. There was no fixed template — it decided which components to use, how to lay them out, and what to put inside each one. Everything below is one example of what your agent can hand back as a single shareable link.

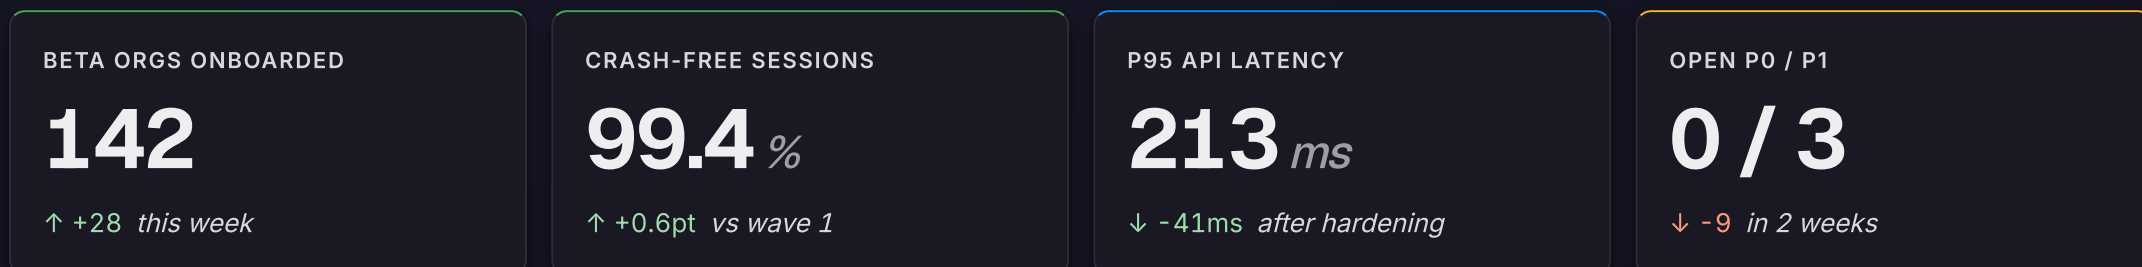

Atlas 2.0 — Launch Readiness Review

Go / No-Go review · 25 May 2026 · Owner: Platform team · Target GA: 30 May

✅ **Recommendation: GO for 30 May.** All P0 blockers are closed and every beta metric is at or above target. One open item — EU data-residency docs — is tracked below and does not gate the code launch.

Where we stand

Beta scorecard

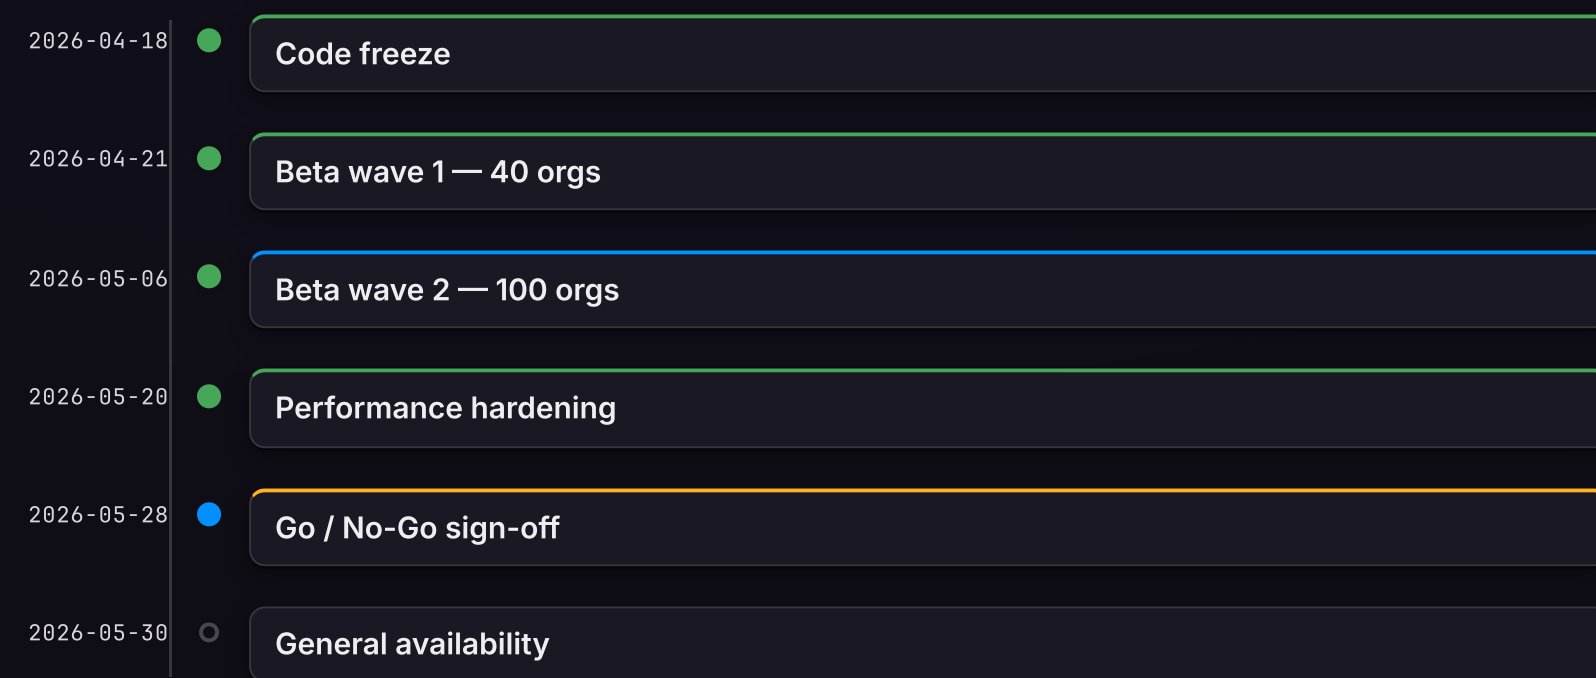

Launch-blocker burndown

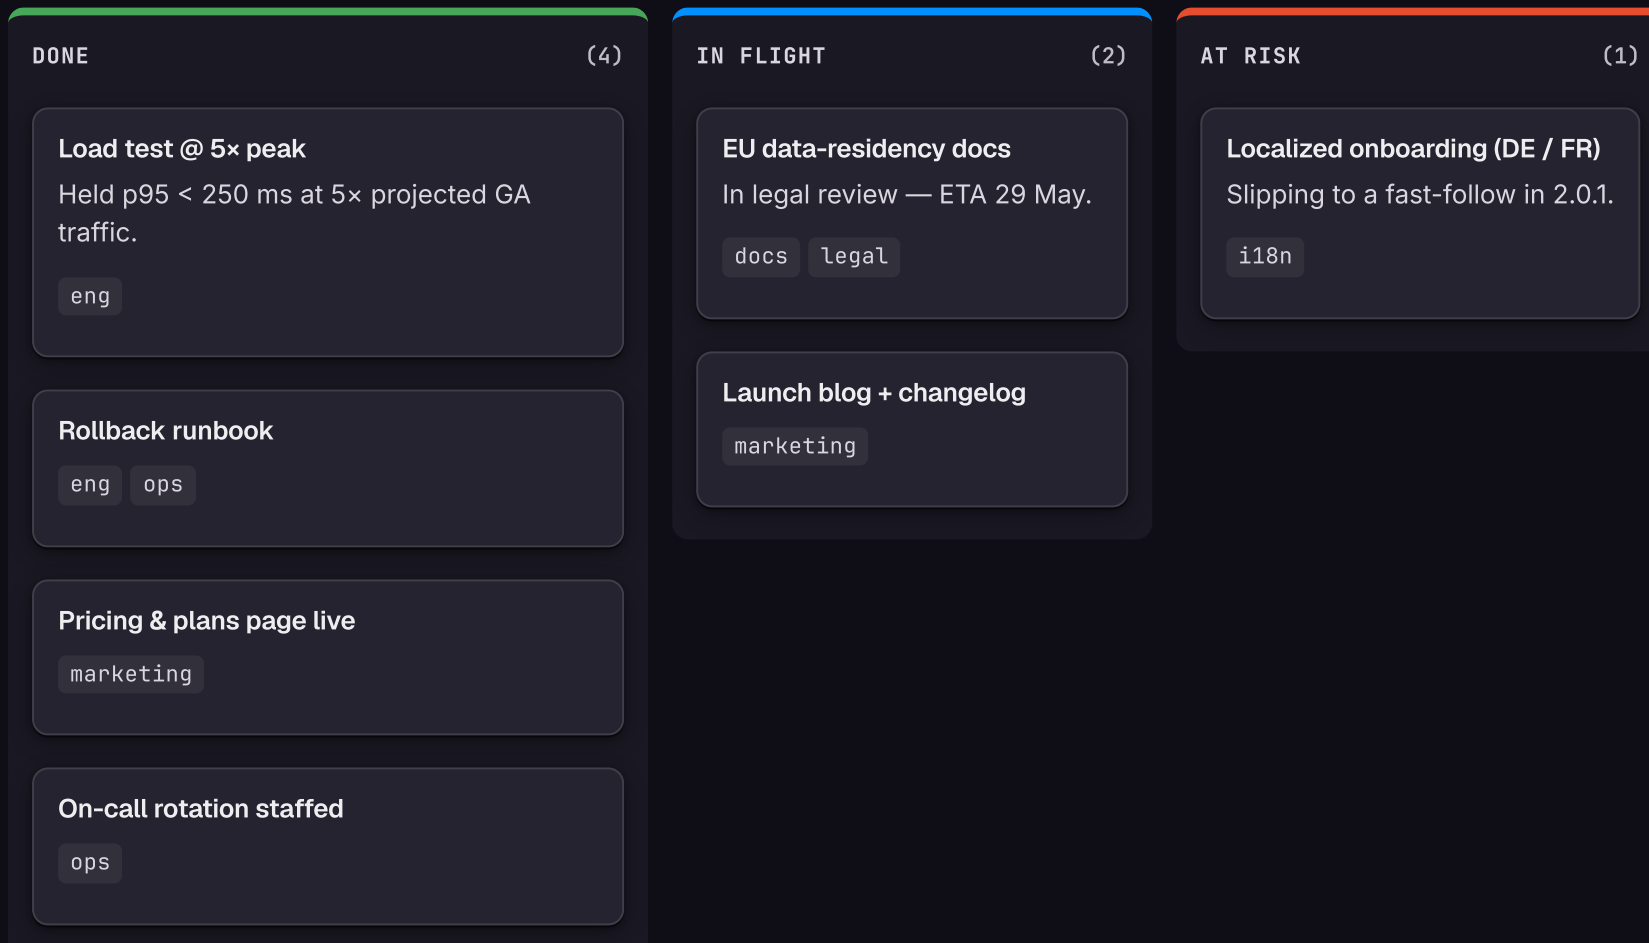

Road to GA

Milestones

Readiness by workstream

Launch checklist

Open risks

Risk	Severity	Owner	Mitigation
EU data-residency docs incomplete	Medium	Legal	Ship as day-2; note in release notes
Localized onboarding not ready	Low	Growth	Fast-follow in 2.0.1
Support volume spike at GA	Medium	Support	+2 temp agents; macros pre-written

⚠️ **Only caveat:** EU data-residency documentation is still in legal review. It does not block code GA, but hold the EU marketing push until it lands (ETA 29 May).

This is the most stable launch candidate we've shipped — the burndown held the line for six straight weeks.
